

Waiver of Immunization

HEPATITIS B Waiver of Immunization

Hepatitis B (HBV) is a serious viral infection of the liver that can lead to chronic liver disease, cirrhosis, liver cancer, liver failure, and even death. Hepatitis B vaccine is available to all age groups to prevent Hepatitis B viral infection. A series of three (3) doses of vaccine are required for optimal protection. Missed doses may still be sought to complete the series if only one or two have been acquired. The HBV vaccine has a record of safety and is believed to provide lifelong immunity in most cases.

I have read the information provided about Hepatitis B disease, vaccine, and have made an informed decision to decline receipt of the vaccine.
